

## **USAACE Mobile Training Team (MTT) Capability**

### **What is it?**

The U.S. Army Aviation Center of Excellence (USAACE) MTT Capability is an initiative to assess operational Army requirements for MTT versions of USAACE courses in support of Army Force Generation (ARFORGEN) and command directives with the purpose to shorten or eliminate requirements to attend institutional training programs.

### **What has the USAACE MTT Capability done?**

Currently, USAACE has very few courses that may be delivered via MTT. The Brigade Aviation Element (BAE) Course is conducted only via MTT with no institutional equivalent. The Tactical Operations Officer Course (TACOPS) has been delivered via MTT, as has the Aviation Maintenance Manager Course (AMMC). The U.S. Army Aviation Logistics School (USAALS) is in the process of delivering the Common Aviation Maintenance (CAM) portion of the 15 series Maintainer Basic Noncommissioned Officer Course (BNCOC) courses via MTT with follow-on institutional training. The Directorate of Training and Doctrine (DOTD) developed a strategy for further assessment of courses to determine the requirements and needs of resetting units in conjunction with the capability of that requirement or need being satisfied by an MTT. This strategy identified the ability to provide efficient, timely training to resetting units. It also allowed us to identify the requirements the unit must supply in order to host an MTT at their home station. The strategy identified the additional resources required to support the conduct of MTTs while maintaining institutional training programs.

### **What continued efforts does the USAACE MTT Capability have planned for the future?**

Requirements for 17 additional instructors and \$329,000 for travel/per diem were submitted to U.S. Army Training and Doctrine Command (TRADOC) in November 2008. TRADOC and the Department of the Army have not authorized resources for these requirements.

### **Why is this important to the Army and Army Aviation?**

Training conducted via MTT allows resetting unit personnel to remain at home station with their families while obtaining the training necessary to support the unit's mission.
